Sexpler - Audio sex sampler Android mobile App

Hi,

I am submitting an Android mobile App. Preferably you would play the teaser video as a fake advertisement before the screening of other films and then have a poster printed or link with instructions on how to download the app on your own. Optionally, one mobile device can be on display with the teaser video played on TV. The app is free of charge - I consider it a speculative design between video art and interactive design mediums and games. It is meant as a comedy but it is based on some real social taboos related to sex. Specifically the anxiety from "having to perform", authenticity and commercialization of sex as a product. Check out the project website for more
